

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of the Claims

1 (CURRENTLY AMENDED): A lighting system located behind a display unit, the lighting

system comprising:

a substrate;

a light emitting element located on the substrate, wherein the light emitting element has a first surface and a second surface, wherein the first and second surfaces are on opposite sides of the light emitting element, wherein the second surface faces the substrate, and wherein the light emitting element contains an organic electroluminescent material and has a red light emitting layer, a blue light emitting layer, and a green light emitting layer;

a first electrode located on the first surface of the light emitting element, wherein the first electrode is of a light transmittance type;

a second electrode located on the second surface of the light emitting element, wherein, when a voltage is applied across the first electrode and the second electrode, the entire light emitting element emits light toward the direction of the first electrode;

a passivation film located on the first electrode to prevent moisture from entering the light emitting element, wherein the passivation film is of a light transmittance type and covers the entire surface of the first electrode that faces away from the light emitting element, the passivation film made of silicon nitride, silicon oxide, or diamond-like carbon, and the thickness of the passivation film being less than that of the substrate; and

In reply to Final Office Action dated July 5, 2006
U.S. Appl. No. 10/613,712
Paper dated October 5, 2006

Docket No. 5000-5112

a light outputting surface located on the passivation film, wherein white light emitted by the light emitting element is outputted from the light outputting surface toward the display unit.

2 (ORIGINAL): The lighting system according to claim 1, wherein the light emitting element is formed as a sheet.

3 (ORIGINAL): The lighting system according to claim 1, which includes a reflecting portion, wherein the reflecting portion faces the second surface and reflects light that reaches the reflecting portion.

4 (ORIGINAL): The lighting system according to claim 3, wherein the second electrode functions as the reflecting portion.

5 - 7 (CANCELLED):

8 (CURRENTLY AMENDED): A display, comprising:

a backlighting unit, wherein the backlighting unit includes:

a substrate;

a light emitting element located on the substrate, wherein the light emitting element has a first surface and a second surface, wherein the first and second surfaces are on opposite sides of the light emitting element, wherein the second surface faces the substrate, and wherein the light emitting element contains an organic electroluminescent material and has a red light emitting layer, a blue light emitting layer, and a green light emitting layer;

a first electrode located on the first surface of the light emitting element, wherein the first electrode is of a light transmittance type;

a second electrode located on the second surface of the light emitting element, wherein, when a voltage is applied across the first electrode and the second electrode, the entire light emitting element emits white light toward the direction of the first electrode;

a passivation film located on the first electrode to prevent moisture from entering the light emitting element, wherein the passivation film is of a light transmittance type and covers the entire surface of the first electrode that faces away from the light emitting element, the passivation film made of silicon nitride, silicon oxide, or diamond-like carbon, and the thickness of the passivation film being less than that of the substrate; and

a light outputting surface located on the passivation film, wherein white light emitted by the light emitting element is outputted from the light outputting surface; and

a display unit located on the backlighting unit, wherein the display unit displays an image by using white light outputted from the light outputting surface.

9 (ORIGINAL): The display according to claim 8, wherein the display unit includes a plurality of liquid crystal elements.

10 (ORIGINAL): The display according to claim 9, wherein the display unit is a transmissive liquid crystal unit or a semitransmissive liquid crystal unit.

11 (ORIGINAL): The display according to claim 8, wherein the light emitting element is formed as a sheet.

In reply to Final Office Action dated July 5, 2006
U.S. Appl. No. 10/613,712
Paper dated October 5, 2006

Docket No. 5000-5112

12 (ORIGINAL): The display according to claim 8, wherein the display unit is located on the light outputting surface.

13 (ORIGINAL): The display according to claim 12, wherein the display unit is brought into intimate contact with the passivation film.

14 (ORIGINAL): The display according to claim 8, wherein the backlighting unit includes a reflecting portion, wherein the reflecting portion faces the second surface and reflects light that reaches the reflecting portion.

15 (ORIGINAL): The display according to claim 14, wherein the second electrode functions as the reflecting portion.

16-18 (CANCELLED):
